What is Web Development?

Web Development

It is the process of designing, creating, and maintaining websites and applications that operate over the internet. These tools allow users to access them through a web browser from various devices. These applications are built using a variety of programming languages, each responsible for a specific part of the application.

What is Front-end?

What is back-end?

Front-end

- Graphical interfaces
- Responsive design
- User experience
- Performance

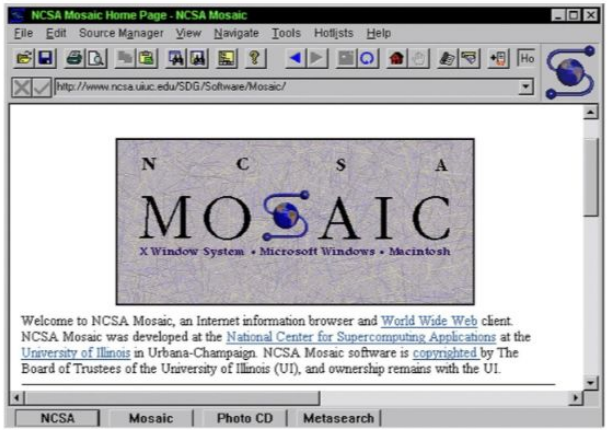

Back-end

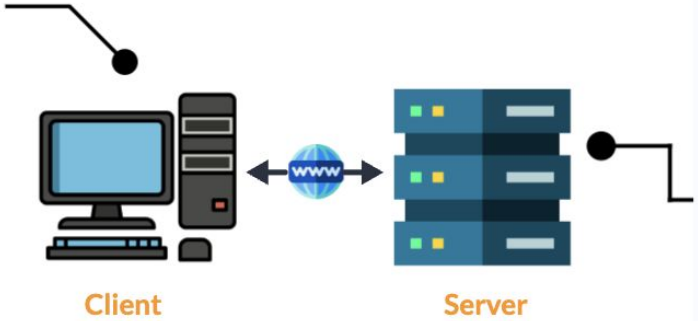

- Business rules
- Services
- Data Bases
- Servers

What is a library?

Library

It's a set of predefined functions and reusable code that simplifies and speeds up the web application development process. These libraries contain common tools and functions that developers can use to perform specific tasks. By leveraging a library, you can save time and effort by not having to write code from scratch, allowing you to focus on the application's logic and functionality.

What is a Stack?

Stack

A technology stack refers to the set of technologies used to create and manage a web application. This set includes both front-end and back-end software. The choice of stack depends on the project requirements, the team's skills, and other factors that influence the application's development and scalability.

E-commerce

An e-commerce platform, or electronic commerce website, is an online platform that allows users to buy and sell products or services over the internet. These platforms provide a user-friendly interface where users can browse product catalogs, make secure purchases, and manage financial transactions. E-commerce sites can range from small online stores run by individuals to large marketplaces that connect sellers and buyers worldwide.
